

EDUCATIONAL SERVICES

Education is the key for students working toward vocational and life goals. Sometimes the emergence of behaviors and symptoms related to behavioral health

challenges interfere with a person's ability to effectively access educational support. New Vitae Wellness and Recovery combines the clinical, educational and residential services to assure that an individual has every opportunity to achieve success.

Certified teachers assist in the design and implementation of educational planning which focuses on the support needed to:

- Complete requirements for graduation
- Prepare for GED examination
- Enhance transitional life skills
- Explore career options
- Pursue post-secondary education options

Services:

- General and special education services via traditional, homebound and virtual learning options, including both 1:1 and small group instruction. Testing necessary to plan and assess programming and progress.
- Individualized instruction for all ability levels.
- Educational case management and coordination with school district liaisons, advisors and trade schools.
- Teachers with specialized training and experience working with a wide range of behavioral health and co-occurring concerns in the context of the educational setting.
- Clinical supports that enhance behavioral health recovery.
- A continuum of residential opportunities — from 24/7 supervision to supported independence — in a variety of settings to meet diverse needs and the ability to move fluidly as needed.
